

DELIVERY MANAGEMENT™ SUITE

HELPING CUSTOMERS DELIVER™

DESCARTES DELIVERY MANAGEMENT™ SUITE

The Descartes Delivery Management Suite integrates design, planning, execution, performance management and messaging solutions that help manufacturers, retailers, distributors, service/maintenance providers and their logistics services providers to optimize inbound and outbound delivery performance.

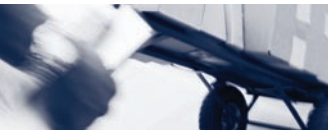

It helps companies: maximize private fleet, contract carrier productivity and customer service; have visibility to global and regional supply chain performance; and capture the data needed to drive world-class logistics operations.

Descartes offers solutions that can be deployed as traditional applications or as a service to help customers optimize and gain real-time control of their inventory, logistics assets and mobile workforce. No matter the size or complexity of the organization, Descartes provides the right solution to meet the needs of our customers.

A recognized innovator in delivery management, Descartes has offered market-proven routing and scheduling solutions for over 20 years. With extensive logistics expertise and a leadership tradition in wireless and messaging, Descartes has deployed advanced delivery applications at over 700 companies.

THE DESCARTES DELIVERY MANAGEMENT SUITE helps companies conduct logistics business more efficiently and effectively by gaining control of global inbound and outbound shipments and transforming logistics focus from cost and asset centric to profit and customer centric.

SOLUTIONS

Strategic Delivery Planning helps companies build new services, sales territories and replenishment strategies designed to maximize customer service and profit. Solutions perform complex service scheduling that simultaneously considers daily, weekly and multi-week deliveries as well as holidays and other non-working days. It also evaluates geographic distribution and sales potential for each customer to help establish optimal territories and routes.

Daily Route & Load Planning helps accelerate a company's ability to continuously create reliable routes using fewer trucks, miles and drivers. As each new order is placed solutions re-optimize in real-time, allocating resources to help maximize operating efficiencies; deliver priority service to the most profitable accounts and routes; and maintain overall customer service objectives.

Reservations facilitate on-line scheduling of deliveries or service—either for self-service or as a decision support tool for customer service agents. It helps companies to effectively tailor service to the demands of key customers while helping to achieve internal profitability goals.

Supply Chain Visibility solutions provide visibility and messaging services in a single, integrated solution. They improve logistics efficiency by enabling companies to foresee order failures before they happen.

Mobile & Wireless help integrate planning, dispatch, delivery status and wireless communications. The solutions provide delivery dispatch, monitoring and two-way wireless communications.

Transportation Management helps to improve the efficiency and control of contract carrier based shipments. Across the entire contracted transportation management lifecycle, Descartes enables transportation planners to make better consolidation decisions and streamlines the carrier bid, tendering, settlement, and the freight auditing processes to help reduce costs and improve customer service.

Reporting Services help companies create and distribute reports as well as send internal queries within an organization or external queries to suppliers, vendors, sub-contractors or carriers. It provides a simple, secure way to create customized delivery statistics and metrics.

Connectivity & Messaging solutions feature an open architecture that enables systems to connect with logistics content, wherever and however it resides. Descartes' approach is to enable easy connectivity regardless of technology sophistication, either with services for messaging or via dial-up EDI or Internet-based transaction processing.

THE DESCARTES DIFFERENCE

Descartes' logistics management solutions combine a multi-modal network, the Descartes Global Logistics Network, with component-based applications to provide messaging services between logistics trading partners, shipment management services for contract carriers and private fleet management services. These solutions and services help Descartes' customers reduce administrative costs, billing cycles, fleet size, contract carrier costs, and mileage driven and improve pick up and delivery reliability. Our hosted, transactional and packaged solutions deliver repeatable, measurable results and fast time-to-value.
