

Closing The Loop on Transportation Management

Descartes MacroPoint: Real-Time Visibility for SAP Customers

SAP and Descartes work together to provide SAP customers with a unified real-time transportation visibility solution. By integrating Descartes MacroPoint with SAP Transportation Management, SAP customers have access to the multi-modal, supply chain visibility platform used by manufacturers, retailers, distributors, freight brokers, freight forwarders and 3PLs to obtain real-time visibility of in-transit shipments. From transporting raw material to home delivery, logistics tracking and analysis is essential to increasing delivery performance and improving customer satisfaction.

Facing these supply chain challenges?

- Customers demanding greater visibility and more accurate on-time delivery
- No single place to view the status of shipments and product specific information in-transit
- Inability to predict and manage disruptions before they occur to minimize their impact
- Limited in-transit inventory planning and inbound logistics coordination
- Increasing detention times and charges
- Seamless flow in actual performance information into SAP Transportation Management

What does Descartes MacroPoint provide?

Real-Time Multi-Modal Visibility

View the location and ETA of every shipment simultaneously in real-time.

Visibility Process Automation

Eliminate the labor intensive process of traditional visibility & communication methods

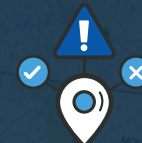

Predictive ETAs

Utilize predictive ETAs that account for things like truck specific routing, estimated H.O.S., weather & traffic.

Carrier Performance Reporting

Automate carrier scorecards & KPI reporting. Create custom reports for other objectives.

GPS-Based Alerting

Receive automated departure, arrival, pre-arrival & at-risk notifications with customizable geofencing.

SKU-Specific Shipment Reporting

Search, filter & report by SKU or any other user-defined data that can be pulled from your TMS

Temperature Monitoring

Temperature monitoring and alerting for refrigerated loads to keep your shipments compliant.

SAP Transportation Management Integration

Descartes MacroPoint integrates via SAP's Logistics 4.0 cloud portfolio for easy implementation

It's all about the network.

The industry's largest carrier visibility network at your fingertips

Customers and your own operations are demanding more actionable visibility data from your transportation network. Getting all that data isn't easy. Descartes has worked hard to create a significant ecosystem of carriers, freight forwarders, 3PLs and logistics services providers. From small to large, Descartes integrates the logistics community to allow it to better work together and serve customers. Manufacturers, retailers and distributors also benefit from the critical mass of participating transportation parties. Expanding the community is a tireless job, but one which we will continue to excel.
