Descartes eAWB for Carriers

Helping Airlines Deploy the eAWB to Improve Efficiency & Increase Compliance

The world air cargo market is under pressure to deliver goods at the fastest speed and the lowest rates. However regulatory and industry factors place substantial pressure on air carriers to deliver and manage timely digital information.

The eAWB is a fundamental step for air carriers to realize measurable gains and better manage data. The challenge is to obtain accurate information from supply chain participants such as air freight forwarders.

Our proven track record, expert technical support and industry experience has enabled Descartes to rapidly roll out the eAWB to carriers worldwide. Our broad offering of air cargo solutions helps the world's leading air carriers to quickly connect to their trading partners to improve performance and drive higher levels of customer satisfaction.

We provide some of the most advanced capabilities available to standardize and automate air cargo and freight management operations, provide real-time shipment status monitoring and improve service by transmitting accurate and timely tracking updates to customers. Descartes' technology can expand with a carrier's needs in parallel to business growth as airlines expand into new regions and product offerings.

With the Descartes eAWB solution, carriers can:

- Better comply with rapidly evolving cargo security filing requirements
- Seamlessly collect eAWB data elements from forwarders and Ground Handling Agents (GHAs)
- Increase the value and quality of information moving throughout an enterprise
- Quickly on-board with our world-class implementation team
- Be better equipped with extensible solutions to enable long-term benefits
