DESCARTES™
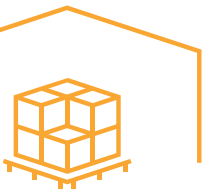

Descartes Ocean Automated Manifest Service™ for Mexico

Helping You Comply with Mexican Customs Electronic Manifest Requirements

Descartes MX Ocean AMS is an Internet-accessible service for entry of ocean manifest information of shipments imported to and exported from Mexico. Data transmitted or entered into Descartes MX AMS by ocean carriers and NVOCCs is stored, formatted and transmitted directly to Mexican customs in accordance with their new filing regulations. The easy-to-use web interface allows data to be entered, validated and managed by you prior to transmission to Mexican customs.

The Descartes MX Ocean AMS solution was designed to comply with the new mandatory Mexican customs regulations that, effective September 1, 2007, apply to all carriers, forwarders and NVOCC's moving ocean shipments through Mexico. Descartes MX Ocean AMS helps you transmit ocean manifest, bill of lading and container information as required by the new Mexican customs regulations.

Information is transmitted in an encrypted EDI specification prior to receipt by Mexican customs. Integration across multiple modules eliminates redundant data-entry for those companies that are able to send the required data through an EDI connection.

Descartes MX Ocean AMS solution is part of the Descartes Global Logistics Network™ (GLN), which enables the world's leading transportation providers to connect to their trading partners and reliably exchange information to drive delivery performance and high levels of customer satisfaction. The Descartes GLN helps companies better manage their logistics book-to-bill process, track inventory, meet regulatory requirements, optimize fleet performance, and effectively communicate with their logistics partners.

DESCARTES™

The Descartes Ocean Automated Manifest (AMS) Service is a solution that helps users easily manage shipment information electronically and enables compliance with the requirement to electronically submit shipment information to CBP for ocean cargo.

Summary

Potential Benefits

- Speed the movement of exports with timely and accurate global manifest data entry/capture and submissions to Mexican

- Keep shipments moving by minimizing customs clearance delays

- Client data is mapped and formatted to required customs compliance standard

- Minimize hardware or software investment

- Improve data accuracy and eliminate paperwork

- Save both time and money per shipment

- Submit manifests from any global location

Features

- Easy-to-use interface with automatic error-checking prior to transmission

- Real-time 24/7 access via internet is available

- 3DES encryption

- Lookup tables

- Reusable transaction files

- Bilingual application

- English language documentation
