

Descartes Forwarder Enterprise™ QW

A Next-Generation Freight Forwarding Back-Office Solution

Forwarders need a digital solution with a light technology footprint that can standardize and automate multimodal shipment management and bring agents and internal operations into one centralized platform.

Developed to meet the needs of forwarders, Descartes Forwarder Enterprise™ QW is a powerful back-office solution that serves as the foundation for small to mid-sized logistics operations. The solution unifies processes and data management for both forwarders and their agents to end re-keying and error-prone communication.

The intuitive, multi-language capable, cloud-based platform ensures that multiple offices communicate and pass information seamlessly across departments including accounting and billing. By consolidating all import and export shipments in one solution and automating repetitive processes, forwarders can better manage operations, reduce labor, and take the pulse of operational and financial performance.

Descartes Solution Pillar

Forwarder and Broker Enterprise Systems

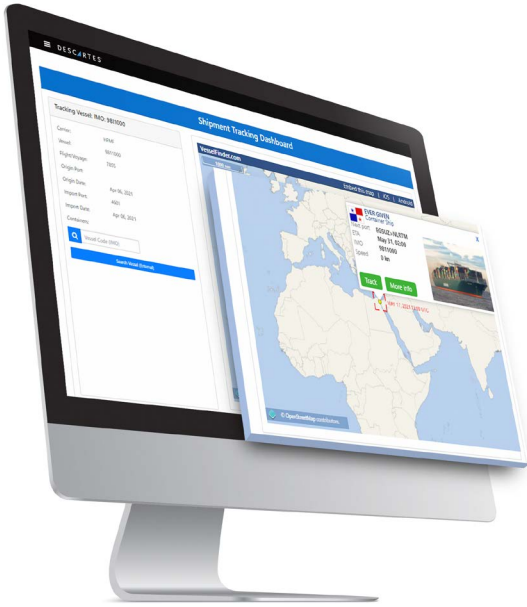

About the Solution

A web-based, cloud-delivered enterprise-level freight forwarding solution that enables forwarders to efficiently coordinate international operations across modes of transport

TOP FEATURES

- Support of multiple languages and currencies
- Powerful web and cloud-based technology
- Fully integrated accounting
- Powered by the Descartes Global Logistics Network™ (Descartes GLN™)

A Web-based Feature-rich Shipment Management Solution

Descartes Forwarder Enterprise QW is a fully-integrated, web-native solution that delivers complete support for multimodal import and export shipment management with a light technology footprint. With an accounting system designed specifically for the complex requirements of forwarders, businesses can better ensure that services rendered are quickly and accurately billed without re-keying data in multiple systems.

Feature-rich support of complex multi-leg, multi-mode, and door-to-door shipments makes Descartes Forwarder Enterprise QW the premiere choice for small to mid-size forwarders to fully manage their business.

THE SOLUTION FEATURES:

Web & Cloud-based Architecture

- Web-based technology and secure cloud-based data transfer enables forwarders to provide continuous access to users and agents worldwide

Integrated Accounting Platform

- With shipment data seamlessly passed into accounting and billing, there is no need to re-enter or parse information into multiple platforms

Multi-Office & Multi-Currency Capable

- Flexible cross-office connectivity and support of multiple currencies enables forwarders to better manage and analyze their global business

Multimodal Shipment Management

- Support of import and export shipments across all modes of transport helps forwarders provide a broader range of services and manage them internally

Rich Reporting & Analysis

- Advanced analytics allows forwarders to gain a deeper understanding of customer and internal performance

Powered by the Descartes Global Logistics Network™ (Descartes GLN™)

- Connectivity to the reach and power of the Descartes GLN enables forwarders to have access to the largest logistics data platform available
