DESCARTES™

Get started quickly with EDI communication

As a supplier, you want to exchange EDI messages. This is often a retailer's requirement in order to be able to deliver your product to them. However, implementation procedures are too time-consuming or an integrated solution is just not feasible for your organization. In that case, a web solution is the best choice. Go-webEDI provides the ideal means to get started with EDI. It allows you to receive orders from retailers via a web portal and easily return a packing slip (DESADV) and an invoice (INVOIC).

Go-webEDI is a cloud-based application that provides access through a secure internet connection. There is no need for you to invest in software. All information is maintained and stored in a centralized environment. This way, you always have the correct data at your fingertips and are able to effortlessly manage your products.

The Go-webEDI interface is very user-friendly and offers a well-organized folder structure. The system notifies you of all new orders by e-mail. Preparing an invoice or packing slip with Go-webEDI is very simple, and creating and printing SSCC labels takes no time at all.

For a fixed monthly fee, Go-webEDI provides a simple and highly effective tool with which you can exchange EDI messages with your customers.
